Week 8 Schedule and Tasks

Select tasks that have the <mark>// High priority</mark> comment first. I only put it on tasks that are a part of no frills basic functionality.

Melissa
- QA

Ryan
- Date picker

Hans
- Login Screen
- Decorator

Alex
- UX

Johnathan
- Continue working on search functionality
- Handle ParseUser being saved on event creation <mark>RESOLVED</mark>

Jenny
- Fix issue where only 7 events are loaded <mark>RESOLVED</mark>
  - This is happening because visibility for new events is set to private (only poster visible).
  - To fix: in AddNewActivity, make sure "read" is set to public and "write" set to private
- Pull to update = new events appear on top not bottom
- Contact button <mark>RESOLVED</mark>

Front end work

- Searching - GUI element for searching events <mark>// highest priority</mark>
- Continuous loading of elements - GUI elements loading new events <mark>// highest priority</mark>
- Need to make create event fill out all the fields <mark>// highest priority</mark> <mark>RESOLVED</mark>
- Have RSVP button update the number of attendees for the event <mark>// high priority</mark>
- Need to redo the events GUI, right now it doesn't show enough enough info and looks ugly(boxes that cutoff the info, make sure things don't get cutoff). <mark>// high priority</mark>
- Find a better way to handle login / splash page
- Transitions(decorators)
- User settings(tags, etc.) - lowest priority - (don't bother unless everything else done and/or you have nothing else to work on)

- https://github.com/sinch LOL
- Having a way for one person to initiate contact with another person
- Us doing the user stories?
- Sorting the events in a trending on top way (?)
- Creation profile page, allowing users to see events they're interested in
- Login page first
- Create Page (no Event object is made, fields go directly into db)-> parse database -> Show Event on Page(Event parseEvent)
  - Only the manually created parseEvents show up
- Scrollview is the XML item that we can drag the buttons into so that we can scroll through the objects (e.g. no need to close keyboard just to see the password box)

Back end work

- Fix issue with only some events being loaded // highest priority
- Continuous loading of events - Keep track of loaded events so that loading new events doesn't display ones that are already shown // highest priority
- Fine tuning of search functionality // high priority
- Handle storing user info on event creation, phone number and RSVP, and contact // high priority

Other things

- Magic Numbers

Updates

- **Abhinav OH**
  Scheduled: Feb 25, 2016, 3:45 PM to 4:15 PM
  Location: CSE B240
- **Meeting w/ Kesden**
  Scheduled: Feb 26, 2016, 2:30 PM to 3:00 PM
  Location: kesdens office at CSE 2126
- Meeting with other Teams
-
